GROUND WATER IN ONTARIO

SOUTH-CENTRAL AREA

1965-1967

INTRODUCTION

This bulletin contains ground-water information assembled for the south-central area of the province for the period 1965 to 1967. It is the fourteenth publication in which basic data have been assembled on ground-water conditions in Ontario.

Thirteen prior publications are listed in Appendix D. The first three, containing data for the years from 1947 to 1952, were published by the Ontario Department of Mines; the next ten by the Ontario Water Resources Commission.

Four areas have been selected for grouping of data to aid in preparing and using the bulletins: the southwestern area, the south-central area, the southeastern area and the northern area. Their extents are shown on the map on page iv. This form has been adopted because it is more convenient, for users seeking information about conditions in a particular area, to be able to consult one book for data over extended periods rather than consult several books with annual data.

This bulletin contains the well logs for the following counties:

Durham	Lennox and Addington	Peel	Simcoe
Haliburton	Northumberland	Peterborough	Victoria
Halton	Ontario	Prince Edward	York
Hastings			

The data in this bulletin have been restricted to the logs of water-wells which are found in Appendix C, a summary of the well log data in Appendix B and a list of licensed boring and drilling contractors in Appendix A. Details on the Geography, Hydrogeology and Regional Aquifer Characteristics of the South-central Area are to be found in Water Resources Bulletin 2-7.

Observation well data formerly appearing with the data in this publication will now appear in separate bulletins.

Enquiries concerning the data in this bulletin should be directed to the Supervisor, Hydrologic Data Branch, Division of Water Resources.

Records are being received constantly and data not yet published are available for reference in the offices of the Hydrologic Data Branch.

Acknowledgments

The water-well boring and drilling contractors licensed to work in Ontario submitted well logs and water-well data to the Commission. In so doing, they played an important part in the assembly of valuable hydrogeologic data. The service rendered in the public interest deserves high tribute and is gratefully acknowledged.

Preparation of the bulletin was supervised by Mr. B. A. Singh, Supervisor, Hydrologic Data Branch, under the direction of Mr. D. N. Jeffs, Assistant Director, Division of Water Resources. The following staff of the Division of Water Resources worked in the preparation of the bulletin: Mrs. M. Ellis, Mrs. P. Hollett, Mrs. F. McClements, Messrs. A. J. Tasker, A. Fuchs, and J. A. Haw.

LICENSED BORING AND DRILLING CONTRACTORS - 1965-1967

Appendix A is a list of licensed water-well boring and drilling contractors for the whole province and the number of wells constructed by each contractor in each of the years under review. The contractors are listed according to their county or district of residence, but the wells shown against each contractor were not necessarily constructed in the county or district in which the contractor resided.

WATER-WELL RECORDS

All water-well records forwarded by contractors are on file at the offices of the Ontario Water Resources Commission in Toronto and are available to the public for reference purposes.

The number of records submitted by contractors for the south-central area for the period covered by this bulletin are shown below:

Year	1965	1966	1967
No. of wells reported	3322	3401	3304
Percentage of wells reported to be dry	1.6	1.8	1.4

Most of the important information from the records has been compiled in Appendix C and summarized in Appendix B. All information is essentially as supplied by the driller except for obvious errors which have been corrected by the staff of the Hydrologic Data Branch. The logs have rarely been changed, except in a few instances where frequent repetitions of formations in long logs have been combined into more convenient general descriptions.

Wells drilled in parts of townships annexed by adjoining municipalities are recorded generally in the townships in which the wells were situated at the time of construction.

The pumping-test rates, reported in gallons per minute, do not necessarily represent the rates at which the wells could continue to supply water for prolonged periods of pumping. Continuous pumping at the stated rates could have resulted in some of the wells being pumped dry, while others may have been capable of being pumped steadily at much higher rates than those carried out during the pumping tests.

Well water intended for use by municipalities or in churches, schools, hotels, and buildings generally occupied by several families or groups of people, was classified as public supply under the "Use" heading. Water used in garages, stores, and restaurants was classed as commercial; in factories, and dairies, as industrial; for greenhouses and market gardens, as irrigation.

Many test holes had no water data recorded. In most, if not all, of these holes some water was encountered, but as a large supply was being sought, usually for municipal purposes, no attempt was made to measure any flow where the formation or water conditions appeared unfavourable for large yields.
